CONTENTS OF VOLUME 18

Number 1, January 1992

SYMPOSIUM OVERVIEW

An Update on Exposure and Effects of Lead
Barbara D. Beck .......................................................... 1

SYMPOSIUM OVERVIEW

Health Effects of Atmospheric Acid Aerosols: A Model Problem in Inhalation Toxicology and Air Pollution Risk Assessment
Richard B. Schlesinger and Judith A. Graham ..................... 17

REGULAR ARTICLES

Chronic Toxicity Carcinogenicity Studies of Triethanolamine in B6C3F1 Mice
Yoichi Konishi, Ayumi Denda, Kazuhiko Uchida, Yohko Emi, Hitoshi Ura, Yoshihiko Yokose, Kazumi Shiraiwa, and Masahiro Tsutsumi .............................................................. 25

Dermal Absorption of Dilute Aqueous Chloroform, Trichloroethylene, and Tetrachloroethylene in Hairless Guinea Pigs
Kenneth T. Bogen, Bill W. Colston, Jr., and Lesia K. Machicao ........ 30

Immunotoxicological Characteristics of Sodium Methyldithiocarbamate
Stephen B. Pruett, Donna B. Barnes, Yun-Cheng Han, and Albert E. Munson ......................................................... 40

Subchronic (13-Week) Toxicity Studies of Oral Phenolphthalein in Fischer 344 Rats and B6C3F1 Mice
D. D. Dietz, M. R. Elwell, R. E. Chapin, M. D. Shelby, M. B. Thompson, R. Filler, and M. A. Stedham ................. 48

Reversible Inhibition of Intercellular Communication among Cardiac Myocytes by Halogenated Hydrocarbons
Mark Toraason, Michael J. Breitenstein, and Howard E. Wey ........ 59

Sex Differences in Monochloroacetate Pretreatment Effects on Chloroform Toxicity in Rats
Mary E. Davis and William O. Berndt .................................... 66

Neuropathological Effects of Triphenyl Phosphite on the Central Nervous System of the Hen (Gallus domesticus)
Duke Tanaka, Jr., Steven J. Bursian, and Ellen J. Lehning ........... 72

A Comparison of the Acute Toxicity, Neuropathology, and Electrophysiology of N,N-Diethyl-m-toluamide and N,N-Dimethyl-2,2-diphenylacetamide in Rats

Combined Repeat Dose and Reproductive/Developmental Toxicity Screening Test (OECD): Familiarization Using Cyclophosphamide
Satoru Tanaka, Kunio Kawashima, Katsushi Naito, Makoto Usami, Masahiro Nakadate, Katsumi Imaida, Michihito Takahashi, Yuzo Hayashi, Yuji Kurokawa, and Masuo Tobe ........................................ 89

Evaluation of Teratogenic Potential of N-Formylpiperidine in Rats
Rashmi S. Nair, Lou Alvarez, and Frederick R. Johannsen ............ 96

Reduction by Pyridostigmine Pretreatment of the Efficacy of Atropine and 2-PAM Treatment of Sarin and VX Poisoning in Rodents
I. Koplovitz, L. W. Harris, D. R. Anderson, W. J. Lennox, and J. R. Stewart ....................................................... 102

A Tier Approach for Evaluating the Respiratory Allergenicity of Low Molecular Weight Chemicals
Katherine Sarlo and Edwin D. Clark .................................... 107
Toxicity of the Anticancer Folate Antagonist Trimetrexate in Rats
Michael J. Graziano, Sang-Nam Kim, John R. MacDonald, and John R. Watkins ........................................ 115

Hypocalcemia Induced by Foscarnet (Foscavir) Infusion in Dogs
Åke Ryrfeldt, Thomas Nordgren, and Jan Lundström ................................................................. 126

The Distribution, Elimination, and in Vivo Biotransformation of Aldicarb in the Rainbow Trout (On-
corhynchus mykiss)
Daniel Schlenk, David A. Erickson, John J. Lech, and Donald R. Buhler ........................................ 131

Urothelial Hyperplasia Induced by Carbonic Anhydrase Inhibitors (CAIs) in Animals and Its Relationship
to Urinary Na and pH
G. Durand-Cavagna, R. A. Owen, L. R. Gordon, C. P. Peter, and C. Boussiquet-Leroux ....................... 137

Calibration of Respiratory Gas Exchange Measurements in Inhalation Toxicology Studies
William J. Mautz ................................................................................................................................. 144

Dose-Related Effects of the Hepatocarcinogen, Wy-14,643, on Peroxisomes and Cell Replication
Naoto Wada, Daniel S. Marsman, and James A. Popp ........................................................................ 149

Acute Toxic Effects of Oxamyl in the Rat
V. Fayez and W. W. Kilgore .................................................................................................................. 155

ANNOUNCEMENT .............................................................................................................................. 160

SYMPOSIUM OVERVIEW

Assessment of Exposure to Pulmonary Toxicants: Use of Biological Markers
James A. Bond, Lance A. Wallace, Siv Osterman-Golkar, George W. Lucier, Alan Buckpitt, and Rogene F. Hendersen ................................................................. 161

REGULAR ARTICLES

Time Course of Permeability Changes and PMN Flux in Rat Trachea following O₃ Exposure
C. Young and D. K. Bhalla ..................................................................................................................... 175

Control of the Nephrotoxicity of Cisplatin by Clinically Used Sulfur-Containing Compounds
Mark M. Jones, Mark A. Basinger, and Myron A. Holscher .................................................................. 181

Acrylamide: Dermal Exposure Produces Genetic Damage in Male Mouse Germ Cells
Gustavo A. Gutierrez-Espeleta, Lori A. Hughes, Walter W. Piegorsch, Michael D. Shelby, and Walderico M. Generoso ............................................................................................................. 189

Effects of Diet Type on Incidence of Spontaneous and 2-Acetylaminofluorene-Induced Liver and Bladder
Tumors in BALB/c Mice Fed AIN-76A Diet versus NIH-07 Diet
Floyd R. Fullerton, David L. Greenman, and Thomas J. Bucci .......................................................... 193

Risk Assessment in Immunotoxicology. I. Sensitivity and Predictability of Immune Tests
Michael I. Luster, Christopher Portier, D. Gayla Pait, Kimber L. White, Jr., Chris Gennings, Albert E. Munson, and Gary J. Rosenthal ................................................................. 200

Developmental Toxicity of CI-921, an Anilinoacridine Antitumor Agent
Judith W. Henck, Sandra L. Brown, and John A. Anderson ............................................................... 211

Comparative Metabolism of Methyl Parathion in Intact and Subcellular Fractions of Isolated Rat Hepatocytes
Priscilla N. Anderson, David L. Eaton, and Sheldon D. Murphy ......................................................... 221

Two-Generation Reproduction Study of Hydrotreated Shale Oil Vapors
Charles R. Clark, Paul W. Ferguson, Mark A. Katchen, and Douglas K. Craig ................................. 227
Reproductive Toxicity Evaluation of Acetaminophen in Swiss CD-1 Mice Using a Continuous Breeding Protocol
Jerry R. Reel, A. Davis Lawton, and James C. Lamb IV ................................................. 233

2,4,5-Trichlorophenoxyacetic Acid Influence on 2,6-Dinitrotoluene-Induced Urine Genotoxicity in Fischer 344 Rats: Effect on Gastrointestinal Microflora and Enzyme Activity

Three-Month Effects of MDL 19,660 on the Canine Platelet and Erythrocyte
John T. Yarrington, Cynthia D. Wallace, David E. Loudy, and John P. Gibson ......................... 247

Evaluation of the Potential for Developmental Toxicity in Rats and Mice following Inhalation Exposure to Tetrahydrofuran
Terry J. Mast, Richard J. Weigel, R. Bruce Westerberg, Bernard A. Schwetz, and Richard E. Morrissey 255

Developmental Toxicity of Boric Acid in Mice and Rats
Jerrold J. Heindel, Catherine J. Price, Elizabeth A. Field, Melissa C. Marr, Christina B. Myers, Richard E. Morrissey, and Bernard A. Schwetz .................................................. 266

Sequential Study of the Chronic Nephrotoxicity Induced by Dietary Administration of Ethoxyquin in Fischer 344 Rats
Gordon C. Hard and G. E. Neal ................................................................. 278

Developmental Effects of Methyl Benzimidazolcarbamate following Exposure during Early Pregnancy
Audrey M. Cummings, Marian T. Ebron-McCoy, John M. Rogers, Brenda D. Barbee, and Sandra T. Harris .......................................................... 288

Topical Anesthetic-Induced Methemoglobinemia in Sheep: A Comparison of Benzocaine and Lidocaine
Andrew T. Guertler, Michael S. Lagutchik, and Dale G. Martin ......................................... 294

Pharmacokinetic Analysis of Protection by an Organophosphorus Insecticide, Chlortenvinphos, against the Toxicity of Its Succeeding Dosage in Rats
Takanori Ikeda, Shuji Tsuda, and Yasuhiko Shirasu .................................................. 299

Respiratory and Cardiovascular Changes Associated with Toxic Doses of a Peptide Antagonist of Vasopressin in the Rat
Dennis J. Murphy and Mary E. Joran ............................................................. 307

Neurotoxic Effects of the Anti-Varicella Zoster Virus Agent 2'-Valeryl-6-methoxypurine Arabinoside in Monkeys and Rats Dosed Orally for 90 Days
George M. Szczech and Walter E. Tucker, Jr. ............................................. 314

Number 3, April 1992

COMMENTARY

Recommendations for the Conduct of Acute Inhalation Limit Tests
Prepared by the Technical Committee of the Inhalation Specialty Section, Society of Toxicology .... 321

REGULAR ARTICLES

Alterations in Rat Flash and Pattern Reversal Evoked Potentials after Acute or Repeated Administration of Carbon Disulfide (CS₂)
David W. Herr, William K. Boyes, and Robert S. Dyer ............................................ 328

Comparison of Subchronic Neurotoxicity of 2-Hydroxyethyl Acrylate and Acrylamide in Rats
Virginia C. Moser, Douglas C. Anthony, William F. Sette, and Robert C. MacPhail ................ 343

Chronic Toxicity and Carcinogenicity Studies with the β-Adrenoceptor Antagonist Levobunolol
Age-Dependence of Responses to Acute Ozone Exposure in Rats
Albert F. Gunnison, Patricia A. Weideman, Mary Sobo, Karen L. Koenig, and Lung Chi Chen 360

Hydroquinone: A Developmental Toxicity Study in Rats
Walter J. Krasavage, Ann M. Blacker, J. Caroline English, and Susan J. Murphy 370

Methylene Chloride—An Inhalation Study to Investigate Pathological and Biochemical Events Occurring in the Lungs of Mice over an Exposure Period of 90 Days
J. R. Foster, T. Green, L. L. Smith, R. W. Lewis, P. M. Hext, and I. Wyatt 376

Effect of Supplementation with Folinic Acid, Vitamin B₆, and Vitamin B₁₂ on Valproic Acid-Induced Teratogenesis in Mice
M. M. A. Elmazar, Renate Thiel, and Heinz Nau 389

Arthritis and Hematological Changes Induced by an Analogue of Muramyl Dipeptide in Rats
Tadaki Sugawara, Michiyuki Kato, and Satoshi Takayama 395

Comparative Carcinogenicity of Ethylene Thiourea with or without Perinatal Exposure in Rats and Mice
R. S. Chhabra, S. Eustis, J. K. Haseman, P. J. Kurtz, and B. D. Carlton 405

Evaluation of the Inhalation Toxicity of Diethylethanolamine (DEEA) in Rats
John P. Hinz, John A. Thomas, and Roger Ben-Dyke 418

Acute Urinary Tract Toxicity of Tetraethylorthosilicate in Rats

Bovine Corneal Opacity and Permeability Test: An in Vitro Assay of Ocular Irritancy
Pierre Gautheron, Martine Dukic, Danielle Alix, and Joseph F. Sina 442

Integration of the Human Lymphocyte into Immunotoxicological Investigations
Steven C. Wood, James G. Karras, and Michael P. Holsapple 450

Application of Molecular Encapsulation for Toxicology Studies: Comparative Toxicity of p-Chloro-α,α,α-trifluorotoluene in α-Cyclodextrin Vehicle versus Corn Oil Vehicle in Male and Female Fischer 344 Rats and B6C3F1 Mice
Jinhua Yuan, C. W. Jameson, Thomas J. Goehl, Michael R. Elwell, Joel R. Leininger, Morrow B. Thompson, Glenda Corniffe, and Teresa Carlton 460

Preclinical Safety Evaluation of Dilevalol (SCH 19927), an Antihypertensive Agent, in the Rat
Fred Selan, C. Bruce McCullough, and Hugh E. Black 471

ANNOUNCEMENTS 477

Number 4, May 1992

ISSUES

A Method for Quantitative Assessment of Reproductive Risks to the Human Male
Marvin L. Meistrich 479

REGULAR ARTICLES

Genotoxic Properties of (E)-5-(2-Bromovinyl)-2′-deoxyuridine (BVDU)
Y. Oshiro, C. E. Piper, S. G. Soelter, P. S. Balwierz, and M. L. Garriott 491

Effects of Aminoglycoside Antibiotics on the Auditory Brainstem Response and Post Rotatory Nystagmus in Rats
Masaki Yamamoto, Yuriko Kurata, and Sukehiro Chiba 499
Polychlorotrifluoroethylene (PCTFE) Oligomer Pharmacokinetics in Fischer 344 Rats: Development of a Physiologically Based Model
Allen Vinegar, Connie S. Seckel, Daniel L. Pollard, Edwin R. Kinkead, Rory B. Conolly, and Melvin E. Andersen .......................................................... 504

Assessment of Cytotoxicity Assays as Predictors of Ocular Irritation of Pharmaceuticals
J. F. Sina, G. J. Ward, M. A. Laszek, and P. D. Gautheron ........................................... 515

ortho-Toluidine Blood Protein Adducts: HPLC Analysis with Fluorescence Detection after a Single Dose in the Adult Male Rat
Kenneth L. Cheever, D. Gayle DeBord, Terri F. Swearengen, and Angela D. Booth-Jones .......... 522

Nephrotoxicity of a New Cephalosporin, DQ-2556, in Rats
Michiyuki Kato, Mitsuyoshi Yoshida, Harumi Shimada, Kazumi Akahane, and Satoshi Takayama 532

The Genotoxic Potential of Linear Alkylbenzene Mixtures in a Short-Term Test Battery
E. C. Robinson and R. S. Nair .......................................................... 540

Reproductive and Developmental Toxicity Studies of a Linear Alkylbenzene Mixture in Rats
E. C. Robinson and R. E. Schroeder .................................................. 549

Assessment of the Potential Genotoxicity of Perfluorodecanoic Acid and Chlorotrifluoroethylene Trimer and Tetramer Acids
C. S. Godin, B. C. Myhr, T. E. Lawlor, R. R. Young, H. Murli, and M. A. Cifone .................. 557

Covalent Protein Modifications and Gene Expression Changes in Rodent Liver following Administration of Methapyrilene: A Study Using Two-Dimensional Electrophoresis
N. L. Anderson, D. C. Copple, R. A. Bendele, G. S. Probst, and F. C. Richardson ................. 570

Subchronic Oral and Intravenous (iv) Safety Evaluation and Pharmacokinetics in Rats and Dogs of Ipaizide Fumarate (Win 54,177-4), an Antiarrhythmic Agent
Yigal Greener, Brian A. Mayes, Thomas A. Barbolt, Jon P. Kimball, Robert L. Dixon, Raymond M. Everett, Jack H. Dean, David J. Zelinger, David P. Benziger, and Alan M. Ezrin ................................................. 581

Inhalation Toxicity of an Isomeric Mixture of Hydrochlorofluorocarbon (HCFC) 225 in Male Rats
Steven R. Frame, Michael C. Carakostas, and David B. Warheit ...................................... 590

13-Week Inhalation Toxicity Study of Dimethylformamide (DMF) in Cynomolgus Monkeys
M. E. Hurtt, M. E. Placke, J. M. Killinger, A. W. Singer, and G. L. Kennedy, Jr. .................. 596

Reproductive Toxicity of Triethylene Glycol and Its Diacetate and Dimethyl Ether Derivatives in a Continuous Breeding Protocol in Swiss CD-1 Mice
Nancy L. Bossert, Jerry R. Reel, A. Davis Lawton, Julia D. George, and James C. Lamb IV .......... 602

Reproductive Toxicity of Sulfamethazine in Swiss CD-1 Mice during Continuous Breeding
Jerry R. Reel, Rochelle W. Tyl, A. Davis Lawton, and James C. Lamb IV ............................ 609

Lithium-Induced Nephrotoxicity in Rats following Subcutaneous Multiple Injections and Infusion Using Mini-osmotic Pumps
S. A. Qureshi, H. S. Buttar, and I. J. McGilveray .................................................. 616

Comparative Immunosuppression of Various Glycol Ethers Orally Administered to Fischer 344 Rats
Ralph J. Smialowicz, Wanda C. Williams, Marie M. Riddle, Debora L. Andrews, Robert W. Luebke, and Carey B. Copeland .................................................. 621

SHORT COMMUNICATIONS

Comparison of the Immunotoxicity of Propanil and Its Metabolite, 3,4-Dichloroaniline, in C57Bl/6 Mice
John B. Barnett, Jay Gandy, Darin Wilbourn, and Sue A. Theus ........................................ 628
Effect of the Peroxisome Proliferator LY171883 on Hepatocellular Replication in Female B6C3F1 Mice
Patrick I. Eacho, Teresa L. Lanier, Patricia S. Foxworthy, and Dennis M. Hoover ................. 632

AUTHOR INDEX FOR VOLUME 18 ................................................................. 642

NOTICE
The Subject Index and Chemical Index for Volume 18 will appear in the November 1992 issue as part of the cumulative indexes for the year 1992.
**Fundamental and Applied Toxicology**

**INFORMATION FOR AUTHORS**

Fundamental and Applied Toxicology, an official publication of the Society of Toxicology, publishes scientific articles and reports relating to those broad aspects of toxicology which are relevant to assessing the risk or effects of toxic agents (chemicals, including drugs and natural products or forms of energy) on human and other animal health. Examples include statistical and mathematical methods of risk assessment and safety evaluation studies which are structural, biochemical, or functional in nature. Fundamental and Applied Toxicology also will consider manuscripts that are concerned with methods or systems of evaluation of toxicity as an alternative to the use of experimental animals.

Also included are articles on methods and equipment, regulatory issues or policy articles relevant to the practice of toxicology, scientific reviews on specific topics, and articles from symposia. Special sections will cover Meetings, Book Reviews, and Letters to the Editor.

Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further that any person cited as a source of personal communications has approved such citation.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Society. The Society will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscript handling fee. The Society of Toxicology has established that a manuscript handling fee of $100.00, payable to the Society of Toxicology in United States currency, must accompany the original submission of the manuscript. The name(s) of the author(s) and the title of the manuscript must be included in the check identification information. In the event that this fee cannot be met by the authors or their institution, an explanatory letter must be sent to the Editor with the manuscript. The editorial decision regarding eventual acceptance or rejection of the manuscript will be independent of the submission of the manuscript handling fee.

Submission of manuscripts. All manuscripts (four copies) should be submitted to:

**Fundamental and Applied Toxicology**

Editorial Office
Third Floor
1250 Sixth Avenue
San Diego, California 92101
Telephone: (619) 699-6467
Fax: (619) 699-6859

Form of manuscript. Four complete copies of each manuscript, in English, should be submitted. All manuscripts must be typewritten, double-spaced (including references) on one side of 8.5 x 11-in. white paper with 1-in. margins on all sides.

Page 1 should contain the article title, the names and affiliations of all authors, an abbreviated form of the title (not to exceed 40 characters including letters and spaces), and the name and complete mailing address (and telephone number if possible) of the person to whom all correspondence should be sent. The article title should be comprehensive and descriptive: proprietary names must not be used in titles, but may be identified in footnotes.

Page 2 should contain an abstract starting with the title of the paper, followed by the authors’ names and reference to Fundamental and Applied Toxicology; blanks should be left so that the Editor may fill in the volume and page numbers. The abstract will be limited to 250 words but must contain a concise summary of what was done, the results obtained, and valid conclusions which are drawn therefrom. It must mention the compounds or families of compounds studied, their actions, and the species of animals. It must contain important words which are used as index terms, but not proprietary names.

**Introduction.** State why the investigation was carried out, note any relevant published work, and delineate the objective of the investigation.

**Methods.** New methods or significant improvements of methods or changes in old methods must be described. Methods for which adequate reference can be cited are not to be described. In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

**Results.** Duplication between the text of this section and material presented in tables and figures should be avoided. Tabular presentation of masses of negative data must be avoided and replaced with a statement in the text whenever possible. The statement must include (a) what was done, (b) how it was done, (c) how the data were analyzed, (d) a measure of variability, and (e) the significance of the result.

**Discussion.** This section must relate to the significance of the work to existing knowledge in the field and indicate the importance of the contribution of this study. Needless detailed recapitulation of the results must be avoided. Unsupported hypotheses and speculation should be omitted.

**References.** Names of authors are to be cited in the text with the year of publication in parentheses. When there are more than two authors use the first author's name followed by et al. All papers mentioned in the text must be listed in the reference list and vice versa. References should be listed alphabetically typed double-spaced on a separate sheet at the end of the paper with all authors included. Journal titles should be abbreviated according to *Chemical Abstracts Service Source Index*. 1985. Note the following styles for references.

Footnotes should be identified in the text by superscript Arabic numerals and cited consecutively throughout the paper. All footnotes should be listed in order and typed double-spaced on a separate sheet. Proprietary names of substances and names and addresses of suppliers should be identified in footnotes. If the paper has been presented orally in whole or in part, the date and occasion should be included in a footnote.

Tables must be typed double-spaced on a separate sheet with the title typed directly above the table. Do not use abbreviations in the title. The title and footnotes must contain all the information necessary to understand and interpret the table without reference to the text. Tables must be numbered consecutively with Arabic numerals. Footnotes to tables should be identified by superscript lowercase italic letters and placed at the bottom of the page containing the table. Letters should be assigned to table footnotes alphabetically in order of appearance as the table is read horizontally, not vertically.

Figures should be numbered consecutively with Arabic numerals. All legends are to be typed consecutively on a separate sheet. All figures should be planned to fit the proportions of the printed page (7 1/4 X 9 in.; column width, 3.5 in.; wherever possible, figures will be reduced to single-column width). Lettering on the original figure should be of professional quality or generated by high-resolution computer graphics and should be large enough (10-12 points) to be legible after reduction of the figure to single-column width (approximately 50 to 60%). Differences in type size within a single figure should be no more than approximately 15%. Freehand, penciled, or typewritten lettering is not acceptable. Drawings should be made with the equivalent of black India ink on tracing linen, high-contrast white paper, or Bristol board. Alternatively, high-quality computer graphics may be acceptable. In addition, symbols used to identify points within a graph should be large enough that they will be easily distinguishable after reduction. Graphs should be plotted with black India ink on blue coordinate or white paper no larger than 8.5 X 11 in. Grid lines that are to show must be inked in black.

Photographs must be kept to a minimum. Photographs should be glossy prints (5 X 7 or 8 X 10 in.). High-contrast micrographs should be submitted in quadruplicate. Overlays indicating the parts of the electron micrographs that are to be emphasized must be such that it will require no more than two pages in the present format of the journal.

Nomenclature. For styling of isotope, enzyme, and biochemical nomenclature, consult the extended Instructions to Authors published in each January issue of Archives of Biochemistry and Biophysics.

Abbreviations. Units will be in general accordance with the International System (SI) as adopted by the 11th General Conference on Weights and Measures. Periods are not used after abbreviations (note exceptions, e.g., in. for inches).

Common abbreviations to be used in this journal are:

Reprints. A reprint order form will accompany the proofs. Fifty reprints of each article (without covers) are supplied free of charge. Authors may purchase additional reprints using the form provided.

Communications (Preliminary Reports). Fundamental and Applied Toxicology will accept a limited number of brief reports of work that has progressed to the stage at which it is considered that the science of toxicology would be advanced if the results were made available as soon as possible. These reports will be designated "Preliminary Reports." Authors should submit short papers for this category of publication only when they believe that the rapid communication of the results is of the utmost importance to other investigators. Four copies of the manuscript, with a letter requesting publication as a Preliminary Report, must be submitted and conform strictly to the form and style of the journal. The length must be such that it will require no more than two pages in the present format of the journal.

Letters to the Editor. Letters to the Editor will be accepted for publication subject to Editorial Board approval, provided that the content deals with papers published in Fundamental and Applied Toxicology and that the comments are of scientific value. Letters should be received within two months of mailing of the journal and should be no longer than 250 words. Introduction of new data will not be permitted. Each letter will be submitted to the author of the original paper in order that any reply may be published simultaneously with the letter.
Computers and Biomedical Research provides researchers with up-to-date information concerning the use of computers in biomedicine.

Research Areas Include

- All areas in which computers and biomedicine intersect
- Automated classification of single and multidimensional patterns (diagnosis)
- Computer-based hospital communication
- The development of special techniques and devices for applying computer technology to biomedical systems
- Mathematical models of biological systems
- Physiological data acquisition
- The use of computers for automated control of biomedical environments

An Official Publication of the American Medical Informatics Association
Endorsed by the American College of Medical Informatics

Sample copies and privileged personal rates are available upon request. For more information, please write or call:

Combine the Speed, Ease, and Low Cost of *In Vitro* Mutagenesis Tests with the Predictive Power of Longer and More Costly *In Vivo* Bioassays in as Little as Three Days

Stratagene has developed a line of inbred C57BI6 transgenic mice for mutation analysis *in vivo*. Lambda phage shuttle vectors containing a *LacZ* target gene have been integrated into the genome of each mouse. After delivery of a test compound to the mouse, the lambda phage vectors containing the target gene can be quickly and easily recovered from isolated genomic DNA using Transpack™ *in vitro* packaging extract. Mutations in the target gene are detected by infecting host *E. coli* with the rescued phage and plating in the presence of the chromogenic substrate X-gal. Blue plaques are formed by mutations in the target *LacZ* gene, while intact *LacZ* genes result in clear plaques. The mutant frequency of the test compound is determined by counting the number of easy to read blue plaques versus colorless plaques.

The Big Blue™ mouse mutagenesis assay system*—the only complete short term, whole animal mutagenesis system available.

With our system you can:
- Identify and quantitatively measure the potential mutagenicity of test compounds
- Readily identify mutations
- Obtain results 3 days after exposure to a test compound
- Study the effects of different routes of administration of a test compound on mutagenicity
- Analyze target organ susceptibility to mutagenesis
- Assess germ cell mutagenicity
- Easily characterize mutations by sequence analysis

The Big Blue™ mouse mutagenesis assay system includes everything you need to complete an *in vivo* mutagenesis study. Stratagene will teach you how to use this system in workshops at our corporate headquarters in La Jolla, California. Please call us regarding the licensing of this proprietary technology and bring this system into your laboratory today!
