CONTENTS OF VOLUME 21
Number 1, July 1993

Methoxyacetaldehyde, an Intermediate Metabolite of 2-Methoxyethanol, Is Immunosuppressive in the Rat
Ralph J. Smialowicz, Marie M. Riddle, and Wanda C. Williams ........................................... 1

Are Mouse Strains Differentially Susceptible to the Reproductive Toxicity of Ethylene Glycol Mono-methyl Ether? A Study of Three Strains

Production of Metallothionein and Heat-Shock Proteins in Response to Metals
John W. Bauman, Jie Liu, and Curtis D. Klaassen ................................................................. 15

DNA–Carcinogen Adducts in Circulating Leukocytes as Indicators of Arylamine Carcinogen Exposure
Gerald N. Levy .......................................................................................................................... 23

Respiratory and Immunological Responses of Guinea Pigs to Enzyme-Containing Detergents: A Comparison of Intratracheal and Inhalation Modes of Exposure
Harry L. Ritz, Bettie L. B. Evans, Robert D. Bruce, E. Robert Fletcher, Gerald L. Fisher, and Katherine Sarlo ......................................................................................................... 31

The Encapsulation of Squid Diisopropylphosphorofluoridate-Hydrolyzing Enzyme within Mouse Erythrocytes
W. David McGuinn, Elizabeth P. Cannon, Carie T. Chui, Luqi Pei, Ilona Petrikovics, and James L. Way .......................................................... 38

Chronic Toxicity and Carcinogenicity Studies of 1-Methylnaphthalene in B6C3F1 Mice
Yoshiaki Murata, Ayumi Denda, Hiroshi Maruyama, and Yoichi Konishi .................................. 44

Application of the Tukey Trend Test Procedure to Assess Developmental and Reproductive Toxicity. I. Measurement Data
Joseph M. Antonello, Robert L. Clark, and Joseph F. Heyse .................................................... 52

Nephrotoxicity of Pravadoline Maleate (WIN 48098-6) in Dogs: Evidence of Maleic Acid-Induced Acute Tubular Necrosis
Raymond M. Everett, Gérard Descotes, Michel Rollin, Yigal Greener, James C. Bradford, David P. Benzig, and Susan J. Ward ........................................ 59

Quaternary Silsesquioxanes: A Developmental Toxicity Study in Rats
Waheed H. Siddiqui and Raymond G. York ................................................................................. 66

Risk Assessment in Immunotoxicology. II. Relationships between Immune and Host Resistance Tests

Bioavailability of Arsenic in Soil Impacted by Smelter Activities Following Oral Administration in Rabbits

Chlorpyrifos: Assessment of Potential for Delayed Neurotoxicity by Repeated Dosing in Adult Hens with Monitoring of Brain Acetylcholinesterase, Brain and Lymphocyte Neurotoxic Esterase, and Plasma Butyrylcholinesterase Activities
Rudy J. Richardson, Thomas B. Moore, Usamah S. Kayyali, and Joseph C. Randall ............ 89
Metabolism of Acrylic Acid to Carbon Dioxide in Mouse Tissues
Kurt A. Black, Lavorgie Finch, and Clay B. Frederick ................................................. 97

Toxicokinetics of Intravenous Methanol in the Female Rat
Gary M. Pollack, Kim L. R. Brouwer, and Jodi L. Kawagoe ............................................. 105

Inhibition Patterns of Brain Acetylcholinesterase and Hepatic and Plasma Aliesterases Following Exposures to Three Phosphorothionate Insecticides and Their Oxons in Rats
Janice E. Chambers and Russell L. Carr ................................................................. 111

SHORT COMMUNICATION

DMBA Induces Programmed Cell Death (Apoptosis) in the A20.1 Murine B Cell Lymphoma
Scott W. Burchiel, De Ann P. Davis, Sidhartha D. Ray, and Sandra L. Barton ...................... 120

ANNOUNCEMENTS ................................................................. 125

Number 2, August 1993

Thirteen-Week, Repeated Inhalation Exposure of F344/N Rats and B6C3F, Mice to Ferrocene
K. J. Nikula, J. D. Sun, E. B. Barr, W. E. Bechtold, P. J. Haley, J. M. Benson, A. F. Eidson, D. G. Burt,

Effects of 1,1-Dichloroethene and of Some of Its Metabolites on the Functional Viability of Mouse Hepatocytes
Alexander Kainz, Hilary Cross, Sally Freeman, Andreas Gescher, and J. Kevin Chipman ........ 140

Hepatocyte Spheroids: Prolonged Hepatocyte Viability for in Vitro Modeling of Nongenotoxic Carcinogenesis
Ruth A. Roberts and Anthony R. Soames ................................................................. 149

Reliability of Using Fewer Rabbits to Evaluate Dermal Irritation Potential of Industrial Chemicals
Michael J. Derelanko, Cathy E. Finegan, and Brendan J. Dunn ....................................... 159

Tapetal Effect of an Azalide Antibiotic Following Oral Administration in Beagle Dogs
J. H. Fortner, W. B. Milisen, G. R. Lundeen, A. B. Jakowski, and P. M. Marsh ................... 164

Comparative Carcinogenicity of 5,5-Diphenylhydantoin with or without Perinatal Exposure in Rats and Mice
R. S. Chhabra, J. R. Bucher, J. K. Haseman, M. R. Elwell, P. J. Kurtz, and B. D. Carlton ........ 174

Lead and Behavioral Development in Young Herring Gulls: Effects of Timing of Exposure on Individual Recognition
Joanna Burger and Michael Gochfeld .............................................................................. 187

A Modified Spectrophotometric Method Appropriate for Measuring Cholinesterase Activity in Tissue from Carbaryl-Treated Animals
A. C. Nostrandt, J. A. Duncan, and S. Padilla ............................................................... 196

Effects of 2-Ethylhexanoic Acid on Reproduction and Postnatal Development in Wistar Rats
Sirpa Pennanen, Kai Tuovinen, Hannele Huuskonen, Veli-Matti Kosma, and Hannu Komulainen 204

Percutaneous Penetration of N-Nitrosodiethanolamine through Human Skin (in Vitro): Comparison of Finite and Infinite Dose Applications from Cosmetic Vehicles

Plasma Concentrations in Methyl Isobutyl Ketone-Potentiated Experimental Cholestasis after Inhalation or Oral Administration
Alexandra B. Duguay and Gabriel L. Plaa ........................................................................... 222
Coronary Artery Toxicity in Beagle Dogs Given Indolidan, a Type III Phosphodiesterase Inhibitor  
G. E. Sandusky, J. R. Means, and H. K. Yeager .................................................. 228

Toxicokinetics of Nickel in Mice Studied with the $\gamma$-Emitting Isotope $^{59}$Ni  
Gitte D. Nielsen, Ole Andersen, and Mikael Jensen .............................................. 236

Leucovorin Protection against Repeated Daily Dose Toxicity of Trimetrexate in Rats  
John R. MacDonald, Cynthia L. Courtney, and David G. Pegg ............................... 244

SHORT COMMUNICATION

Investigation of the Effects of Benomyl on Rat Nasal Mucosa  
Mark E. Hurtt, Charles A. Mebus, and Matthew S. Bogdanffy ............................... 253

Number 3, October 1993

EDITOR'S NOTE  
H. d'A. Heck .............................................. 257

SYMPOSIUM OVERVIEW

Risk Assessment of Chemical Mixtures: Biologic and Toxicologic Issues  
M. M. Mumtaz, I. G. Sipes, H. J. Clewell, and R. S. H. Yang ............................... 258

REGULAR ARTICLES

Studies on the Modulating Effects of Retinoic Acid and Retinol Acetate Using Dye Transfer and Metabolic Cooperation Assays  
T. Mercier, E. Honikman-Leban, C. Chaumontet, P. Martel, and M. M. Shahin ............ 270

Prolonged Neurobehavioral and Visual Effects of Short-Term Exposure to 3,3'-Iminodipropionitrile (IDPN) in Rats  
Virginia C. Moser and William K. Boyes .......................................................... 277

Quantitative Measurement of Porphyrins in Biological Tissues and Evaluation of Tissue Porphyrins during Toxicant Exposures  
James S. Woods and Holly D. Miller .............................................................. 291

Optimization of the Hamilton-Thorn Computerized Sperm Motility Analysis System for Use with Rat Spermatozooa in Toxicological Studies

ERRATUM

ANNOUNCEMENT 403

Number 4, November 1993

Effect of Dose, Time, and Pretreatment on the Biliary Excretion and Tissue Distribution of 2,3,7,8-Tetrachlorodibenzo-p-dioxin in the Rat
Lorrene Buckley Kedderis, Melvin E. Andersen, and Linda S. Birnbaum 405

Comparison of ELISA and Plaque-Forming Cell Assays for Measuring the Humoral Immune Response to SRBC in Rats and Mice Treated with Benzo[a]pyrene or Cyclophosphamide
L. Temple, T. T. Kawabata, A. E. Munson, and K. L. White, Jr. 412

A Two-Generation Reproduction Study with Hydroquinone in Rats
A. M. Blacker, R. E. Schroeder, J. C. English, S. J. Murphy, W. J. Krasavage, and G. S. Simon 420

The Effect of Pretreatment on the Biliary Excretion of 2,3,7,8-Tetrachlorodibenzo-p-dioxin, 2,3,7,8-Tetrachlorodibenzofuran, and 3,3',4,4'-Tetrachlorobiphenyl in the Rat
Mary K. McKinley, Lorrene Buckley Kedderis, and Linda S. Birnbaum 425

Endometriosis in Rhesus Monkeys (Macaca mulatta) Following Chronic Exposure to 2,3,7,8-Tetrachlorodibenzo-p-dioxin
Sherry E. Rier, Dan C. Martin, Robert E. Bowman, W. Paul Dmowski, and Jeanne L. Becker 433

Hepatic Failure Leads to Lethality of Chlordecone-Amplified Hepatotoxicity of Carbon Tetrachloride
Madhusudan G. Soni and Harinhara M. Mehendale 442

Comparative Carcinogenicity of Polybrominated Biphenyls with or without Perinatal Exposure in Rats and Mice

Subchronic Toxicity of Cupric Sulfate Administered in Drinking Water and Feed to Rats and Mice
Charles D. Hébert, Michael R. Elwell, Gregory S. Travlos, Chad J. Fitz, and John R. Bucher 461

Assessing the Neurotoxic Potential of Methyl Ethyl Ketoxime in Rats
Gene E. Schulze and Michael J. Derelanko 476
Fundamental and Applied Toxicology

Fundamental and Applied Toxicology, an official journal of the Society of Toxicology, publishes scientific articles relating to those broad aspects of toxicology that are relevant to assessing the risk of harmful effects from exposure to chemicals, drugs, natural or synthetic products, or radiation on organisms, tissues, or cells. Manuscripts are considered in all fields of toxicology, including both descriptive and mechanistic, as well as interpretive or theoretical investigations that elucidate the risk assessment implications of exposure to toxic agents alone or in combination. Studies may involve either experimental animals or human subjects, or they may focus on in vitro methods or alternatives to the use of experimental animals. Examples of suitable topics include toxicologic studies which are structural, biochemical, or functional in nature, investigations of the effects of dose, route of exposure, metabolism, or species on toxic responses, and statistical or mechanism-based approaches to risk assessment. Manuscripts may describe either new methods or new findings. Also published are symposium summaries, reviews in toxicology, commentaries on the scientific basis of regulatory policies, viewpoints relevant to the practice or advancement of toxicology, and letters to the Editor.

General guidelines. As a general rule, preference is given to studies that are both clearly relevant to toxicology and hypothesis-driven. The rationale should be sound, and the experimental design should be well conceived. Completeness usually requires that dose–response relationships be examined. Manuscripts that primarily describe new methods, either experimental or theoretical, should provide examples of their use. When studies involve the use of experimental animals, manuscripts should briefly describe the procedures employed for animal care and handling. Experiments that require the use of animals must be conducted in accordance with the Guiding Principles in the Use of Animals in Toxicology, which were adopted by the Society of Toxicology in 1989. A statement of these principles is published in the January issue. Although sometimes not hypothesis-driven, safety evaluation studies of new chemicals or drugs may be published if the work is considered complete and the conclusions are unequivocal. The pre-chronic toxicity profile of a given chemical should be summarized in a single manuscript rather than be allocated among separate manuscripts. Studies that fail to elicit a toxic response (negative studies) might be acceptable if competently performed. However, due to the need to limit the number of pages published annually, it may be necessary to decline a manuscript that is scientifically sound but is judged to be of limited interest to readers.

A manuscript will be considered inappropriate for publication if the subject matter is inconsistent with the missions of the journal, or if the findings largely confirm other published research. A manuscript may be declined for reasons of incompleteness, prior publication of portions of the work, inadequate experimental design or methods, insufficient support for conclusions, or overly specialized subject matter. In the last case, the editors may recommend submission to a more specialized journal or to a journal in a related field.

Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Society. The Society will not refuse any reasonable request by the author for permission to re-produce any of his or her contributions to the journal.

Manuscript handling fee. The Society of Toxicology has established that a manuscript handling fee of $100.00, payable to the Society of Toxicology in United States currency, must accompany the original submission of the manuscript. The name(s) of the author(s) and the title of the manuscript must be included in the check identification information. In the event that this fee cannot be met by the authors or their institution, an explanatory letter must be sent to the Editor with the manuscript. The editorial decision regarding eventual acceptance or rejection of the manuscript will be independent of the submission of the manuscript handling fee.

Submission of manuscripts. All manuscripts (four copies) should be submitted to:

Fundamental and Applied Toxicology
Editorial Office
525 B Street
Suite 1900
San Diego, California 92101-4495
Telephone: (619) 699-6469
Fax: (619) 699-6859

Form of manuscript. Four complete copies of each manuscript, in English, should be submitted. All manuscripts must be typewritten, double-spaced (including references) on one side of 8.5 × 11-in. white paper with 1-in. margins on all sides. Page 1 should contain the article title, the names and affiliations of all authors, an abbreviated form of the title (not to exceed 40 characters including letters and spaces), and the name and complete mailing address (and telephone number if possible) of the person to whom all correspondence should be sent. The article title should be comprehensive and descriptive: proprietary names must not be used in titles, but may be identified in footnotes. Page 2 should contain an abstract starting with the title of the paper, followed by the authors' names and reference to Fundamental and Applied Toxicology; blanks should be left so that the Editor may fill in the volume and page numbers. The abstract will be limited to 250 words but must contain a concise summary of what was done, the results obtained, and valid conclusions which are drawn therefrom. It must mention the compounds or families of compounds studied, their actions, and the species of animals. It must contain important words which are used as index terms, but not proprietary names.

Introduction. State why the investigation was carried out, note any relevant published work, and delineate the objective of the investigation.

Methods. New methods or significant improvements of methods or changes in old methods must be described. Methods for which adequate reference can be cited are not to be described. In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described: if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Results. Duplication between the text of this section and material presented in tables and figures should be avoided. Tabular presentation of masses of negative data must be avoided and replaced with a statement in the text whenever possible. The statement must include (a) what was done, (b) how it was done, (c) how the data were analyzed, (d) a measure of variability, and (e) the significance of the result.

Discussion. This section must relate to the significance of the work to existing knowledge in the field and indicate the importance of the contribution of this study. Needless detailed recapitulation of the results must be avoided. Unsupported hypotheses and speculation should be omitted.

References. Names of authors are to be cited in the text with the year of publication in parentheses. When there are more than two authors use the first author’s name followed by et al. All papers mentioned in the text must be listed in the reference list and vice versa. References should be listed alphabetically typed double-spaced on a separate sheet at the end of the paper with all authors included. Journal titles should be abbreviated according to Chemical Abstracts Service Source Index, 1985. Note the following styles for references.

Footnotes should be identified in the text by superscript Arabic numerals and cited consecutively throughout the paper. All footnotes should be listed in order and typed double-spaced on a separate sheet. Proprietary names of substances and names and addresses of suppliers should be identified in footnotes. If the paper has been presented orally in whole or in part, the date, and occasion should be included in a footnote.

Tables must be typed double-spaced on a separate sheet with the title typed directly above the table. Do not use abbreviations in the title. The title and footnotes must contain all the information necessary to understand and interpret the table without reference to the text. Tables must be numbered consecutively with Arabic numerals. Footnotes to tables should be identified by superscript lowercase italic letters and placed at the bottom of the page containing the table. Letters should be assigned to table footnotes alphabetically in order of appearance as the table is read horizontally, not vertically.

Figures should be numbered consecutively with Arabic numerals. All legends are to be typed consecutively on a separate sheet. All figures should be planned to fit the proportions of the printed page (7 1/2 × 9 in.; column width, 3.5 in.); wherever possible, figures will be reduced to single-column width. Lettering on the original figure should be of professional quality or generated by high-resolution computer graphics and should be large enough (10–12 points) to be legible after reduction of the figure to single-column width (approximately 50 to 60%). Differences in type size within a single figure should be no more than approximately 15%. Free-hand, penciled, or typewritten lettering is not acceptable. Drawings should be made with the equivalent of black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, high-quality computer graphics may be acceptable. In addition, symbols used to identify points within a graph should be large enough that they will be easily distinguishable after reduction. Graphs should be plotted with black India ink on blue coordinate or white paper no larger than 8.5 × 11 in. Grid lines that are to show must be inked in black.

Photographs must be kept to a minimum. Photographs should be glossy prints (5 × 7 or 8 × 10 in.). High-contrast micrographs should be submitted in quadruplicate. Overlays indicating the parts of the electron micrographs that are to be emphasized must be used. Electron micrographs should be submitted not larger than 6.5 × 4.5 in. Magnification should be indicated by a bar on the photograph. Illustrations in color will be accepted only if the authors defray the cost.

Index terms suitable for use in the subject index must be submitted on a separate sheet. The list should include chemical name, generic name, common name, and may include the proprietary name of each important substance used in the experiments. It should also include biological activity of each substance investigated. Terms should elucidate important relationships.

Nomenclature. For styling of isotope, enzyme, and biochemical nomenclature, consult the extended Instructions to Authors published in each January issue of Archives of Biochemistry and Biophysics.

Abbreviations. Units will be in general accordance with the International System (SI) as adopted by the 11th General Conference on Weights and Measures. Periods are not used after abbreviations (note exceptions, e.g., in. for inches).

Common abbreviations to be used in this journal are:

- m meter
- cm centimeter
- mm millimeter
- µm micrometer
- nm nanometer
- kg kilogram
- g gram
- ppm parts per million
- cpm counts per minute
- dpm disintegrations per minute
- µc subcutaneous
- sc intracutaneous
- ic intramuscular
- im intraperitoneal
Reprints. A reprint order form will accompany the proofs. Fifty reprints of each article (without covers) are supplied free of charge. Authors may purchase additional reprints using the form provided.

Communications (Preliminary Reports). *Fundamental and Applied Toxicology* will accept a limited number of brief reports of work that has progressed to the stage at which it is considered that the science of toxicology would be advanced if the results were made available as soon as possible. These reports will be designated "Preliminary Reports." Authors should submit short papers for this category of publication only when they believe that the rapid communication of the results is of the utmost importance to other investigators. Four copies of the manuscript, with a letter requesting publication as a Preliminary Report, must be submitted and conform strictly to the form and style of the journal. The length must be such that it will require no more than four pages in the present format of the journal.

Letters to the Editor. Letters to the Editor will be accepted for publication subject to Editorial Board approval, provided that the content deals with papers published in *Fundamental and Applied Toxicology* and that the comments are of scientific value. Letters should be received within two months of mailing of the journal and should be no longer than 250 words. Introduction of new data will not be permitted. Each letter will be submitted to the author of the original paper in order that any reply may be published simultaneously with the letter.

Personal computer disks. Manuscripts may be submitted to *Fundamental and Applied Toxicology* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing disks for typesetting conversion, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, Inc., 525 B Street, Suite 1900, San Diego, California 92101-4495; telephone: (619) 699-6415; fax: (619) 699-6800).

---

CHAIR, DEPARTMENT OF PHARMACOLOGY AND TOXICOLOGY

WRIGHT STATE UNIVERSITY SCHOOL OF MEDICINE, DAYTON, OHIO

We seek a Ph.D. or M.D. with an established record of external funding, and a commitment to scholarly achievement in research and teaching. We participate in the University’s Biomedical Sciences Ph.D. Program and have teaching responsibilities for medical and nursing students.

The School of Medicine has 240 full-time faculty and over $7 million in extramural research support. It is a model for community-based medical education and is a leader in recruiting and retaining minority students.

The combined chair/faculty position has a 12 month salary commensurate with experience, startup funds, and an opportunity to build and shape the direction of the department. Opportunities exist for collaboration with basic and clinical scientists at the Tri-Service Toxicology Center at WPAFB and the Dayton VA Medical Center.

Submit curriculum vitae, and the names and telephone numbers of three references to:

Jane N. Scott, Ph.D., Chair, Search Committee
Wright State University School of Medicine
P.O. Box 927, Dayton, OH 45401-0927
FAX (513) 873-3672

Review of applications will begin January 15 and will continue until the position is filled.

Wright State University is an EO/AA employer.

TOXICOLOGY

Battelle Pacific Northwest Laboratories (PNL) is an international leader in the practical application of technology. Battelle PNL is dedicated to both basic and applied research to find ways to preserve our environment and keep America technologically competitive. Our LIFE SCIENCES CENTER has an immediate opening for:

TOXICOLOGY DEPARTMENT MANAGER

This position requires a DVM with a Ph.D. in anatomic pathology, clinical pathology, or toxicology and/or board certification in one of these disciplines. Previous experience in managing a multidisciplinary research organization conducting studies under FDA's Good Laboratory Practices (GLP) regulations is essential. Must have an outstanding research record in toxicology, pathology, or related field. The ideal candidate will have experience in inhalation toxicology, service as Study Director on GLP-regulated projects, and laboratory experience in cell proliferation and molecular toxicology.

Will provide technical leadership for a technical and professional staff of over 100 organized into seven groups: Pathology, Clinical Pathology, Analytical Chemistry, Inhalation Toxicology, Aerosol & Inhalation Research, Bioengineering & Exposure, and Animal Resources. Will be responsible for development of new programs and administrative leadership of the department.

Battelle PNL, one of the nine U.S. Department of Energy multi-program research laboratories is located in Southeast Washington state and offers the advantages of a pleasant life style and the extraordinary environment of the Pacific Northwest.

Interested candidates should send a resume and salary history to: Battelle Recruiting Center, P.O. Box 999, Dept 941012CSP, Richland, WA 99352. Principals Only. EOE.

©Battelle

Putting Technology To Work
Drug Targeting and Delivery

Editor
Alfred Stracher
State University of New York Health Science Center at Brooklyn, New York

Drug Targeting and Delivery focuses on drug delivery technology at the theoretical as well as practical level. The ability to selectively deliver therapeutic agents to specific cells within the body has been one of the most coveted goals in experimental and clinical therapeutics. This journal provides a single literature source for both the academic and industrial communities in this advancing area of study.

Drug Targeting and Delivery includes basic research, development, and application principles on the molecular, cellular, and higher levels of target sites, as well as physical, chemical and immunokinetic modes of delivery.

This new journal is devoted to examining issues of quality assurance and quality control as they relate to biological, physical, and engineering science and technology. Good laboratory, manufacturing, and clinical practice, along with the underlying scientific, regulatory, and legal processes involved, are within the scope of QUALITY ASSURANCE: Good Practice, Regulation, and Law.

The journal provides a forum for discussion of these issues of quality assurance and quality control encountered in research protocols, experimental designs, laboratory investigations, clinical studies, manufacturing processes, audits, and inspections. Articles advocating good practices that produce excellent science leading to compliance with relevant regulations are encouraged.

The Journal of Food Composition and Analysis is devoted to all scientific aspects of the chemical composition of human foods. The journal emphasizes new methods of analysis; data on composition of foods; studies on the manipulation, storage, distribution, and use of food composition data; and studies on the statistics and distribution of such data and data systems. The journal is looking to build on its strong base in nutrient composition and to place increasing emphasis on other food components such as anti-carcinogens, natural toxicants, flavors, colors, functional additives, pesticides, agricultural chemicals, heavy metals, general environmental contaminants, and chemical and biochemical toxicants of microbiological origin.

Features
• Data and methods for natural and/or normal chemical and biochemical components of human foods—including nutrients, toxicants, flavors, colors, and functional additives
• Methods for determination of inadvertent materials in foods—including pesticides, agricultural chemicals, heavy metals, general environmental contaminants, and chemical and biochemical toxicants of microbiological origin

Research Areas Include
• Computer technology and information systems theory directly relating to food composition database development, management, and utilization
• Effects of processing, genetics, storage conditions, growing conditions, and other factors on the levels of chemical and biochemical components of foods
• Processes of development and selection of single-value entries for food composition tables
• Quality control procedures and standard reference materials for use in the assay of food components
• Statistical and mathematical manipulations involved with the preparation and utilization of food composition data

Volume 6 (1993), 4 issues In the U.S.A. and Canada: $96.00 All other countries: $112.00 ISSN 0889-1575
